

Akansha Tiwari

Software Engineer · React · TypeScript · Node.js · Go

India · akanshat1999@gmail.com · +91 9131077611

linkedin.com/in/akansha-tiwari-10 · github.com/akanshat · akansha.site

Software engineer with 4.5 years in React and TypeScript. First frontend hire at Phaidra, an industrial AI company, promoted to Software Engineer II; built tools to map, monitor and control chiller plants.

EXPERIENCE

Career Break

Jan 2026 – Present

- Laid off from Phaidra in a company-wide reduction. Since then, working through Fly.io's **Gossip Glomers** distributed systems challenges in Go.
- Sharpening **system design and algorithms** for interviews, and researching backend and platform engineering roles.

Phaidra · Product Engineering · Remote

Dec 2021 – Jan 2026

Software Engineer II (promoted)

Jul 2023 – Jan 2026

- Built the graphs in an **AI chatbot** that answers plant data questions visually (RAG, LangChain.js).
- Stress-tested **AG Charts** and Highcharts with millions of points and moved the chatbot's charts to AG Charts, which held up at six or more series of a million points each.
- Built the constraints editor in **Phaidra's control product**, where operators order constraints and run inference, and later added versioning with rollback to any tagged version.
- Added a **Gantt-style timeline view** to the tag mapping tool so solution engineers could spot data gaps at a glance, then paginated the component table and virtualized the timeline once plants grew to thousands of components.
- Wrote **PRDs** for features I led, clearing up requirements with product, design and operations and proposing UX and flow changes; reviewed backend API specs.
- Took frontend **on-call** shifts for the product team, debugging production issues with backend engineers.

Software Engineer I

Dec 2021 – Jul 2023

- Joined as the **first frontend engineer**. Reviewed and cleaned up code from outside contractors, then rewrote the Phaidra portal, which charts chiller plant temperature, setpoints, efficiency and when AI control was on or off.
- Built the **tag mapping tool**, where solution engineers map sensor tags to plant components and compose expressions over hundreds of tags by picking them from a list instead of writing code.
- When **10,000+** sensor point lists began crashing the editor, added virtualization and backend paginated search.
- Fixed broken pipelines and tests across the team, and helped QA engineers new to code get **Cypress** running.

Reliance Jio · Software Engineer · JioMart B2B · Mumbai, India

Jul 2021 – Nov 2021

- Rebuilt the **JioMart B2B** partner app, previously native Android, as a responsive TypeScript web app, including partner onboarding, order management and inventory sync.
- Set up the product's **design system** (reusable components, design tokens) and added Jest tests.

OPEN SOURCE

Thanos (CNCF) · LFX Mentee

Sep 2021 – Nov 2021

- Added a client-side caching layer in Go to **Thanos Store**, improving query reliability across distributed storage workflows.
- Reworked the cache onto **galaxycache** after maintainer feedback, cutting memory overhead and simplifying eviction.

SKILLS

- Languages:** TypeScript, JavaScript, Go, Java, HTML, CSS
- Frontend:** React, Next.js, Redux, Zustand, Tailwind, MUI, AG Charts, Highcharts, D3.js
- Backend:** Node.js, Express, Spring Boot, REST APIs, MongoDB
- AI:** LangChain.js, RAG, Cursor, Claude
- Testing and tools:** Cypress, Playwright, Jest, React Testing Library, Git, GitHub Actions, Docker, Vite, Webpack

EDUCATION

B.Tech, Computer Science · IIIT Gwalior · CGPA 8.08/10

2017 – 2021
