

Akansha Tiwari

Software Engineer · React · TypeScript · Node.js · Go

India · akanshat1999@gmail.com

linkedin.com/in/akansha-tiwari-10 · github.com/akanshat · akansha.site

Software engineer with 4.5 years in React and TypeScript, specializing in data-heavy interfaces. First frontend hire at Phaidra, an industrial AI company, promoted to Software Engineer II; built tools to map, monitor and control cooling for AI data centers and chiller plants. On a career break since a company-wide layoff in January 2026; now working through Fly.io's [Gossip Glomers](#) distributed systems challenges in Go and sharpening system design.

SKILLS

- **Languages:** TypeScript, JavaScript, Go, Java, HTML, CSS
- **Frontend:** React, Next.js, Redux, Zustand, Tailwind, MUI, AG Charts, Highcharts, D3.js
- **Backend:** Node.js, Express, Spring Boot, REST APIs, MongoDB
- **AI:** LangChain.js, RAG, Cursor, Claude
- **Testing and tools:** Cypress, Playwright, Jest, React Testing Library, Git, GitHub Actions, Docker, Vite, Webpack

EXPERIENCE

Phaidra · Product Engineering · Remote Dec 2021 – Jan 2026

Software Engineer II (promoted) Jul 2023 – Jan 2026

- Built the graphs in an **AI chatbot** that answers plant data questions visually (RAG, LangChain.js), choosing AG Charts over Highcharts after stress tests showed AG Charts held up at six series of **a million points each**; live with two enterprise customers ahead of the full product launch.
- Built the constraints editor in Phaidra's control product, where operators order constraints and run inference, and later added versioning with rollback to any tagged version.
- Built a coverage timeline for the tag mapping tool so solution engineers could spot data gaps at a glance, virtualized for plants with ~1,000 components and **15,000+ tags**.
- Wrote or co-wrote PRDs for the features I led, covering edge cases the first drafts missed and proposing UX and flow changes with product, design and operations; reviewed backend API specs.
- Took frontend on-call shifts for the product team, debugging production issues with backend engineers.

Software Engineer I Dec 2021 – Jul 2023

- Joined as the **first frontend engineer**. Reviewed and cleaned up code from outside contractors, then rewrote the monitoring app that **five customers** in pharma and data centers used to track their plants.
- Built the tag mapping tool, where solution engineers map sensor tags to plant components and compose expressions over hundreds of tags from a list instead of code; it replaced the CLI they had struggled with.
- When 10,000+ sensor point lists began crashing the editor, added virtualization and backend paginated search.

Reliance Jio · Software Engineer · JioMart B2B · Mumbai, India Jul 2021 – Nov 2021

- Rebuilt the JioMart B2B partner app, previously native Android, as a responsive TypeScript web app, including partner onboarding, order management and inventory sync.
- Set up the product's design system (reusable components, design tokens) and added Jest tests.

Rakuten · Software Engineer Intern · Bangalore, India Jan 2021 – Jun 2021

OPEN SOURCE

Thanos (CNCF) · LFX Mentee Sep 2021 – Nov 2021

- Added a [client-side caching layer](#) in Go to Thanos Store, improving query reliability across distributed storage workflows.
- Reworked the cache onto galaxycache after maintainer feedback, cutting memory overhead and simplifying eviction.

EDUCATION

B.Tech, Computer Science · ABV-IIITM Gwalior · CGPA 8.08/10

2017 – 2021
